neatorobotics™

Life at Home Should Not Be All Work.

That's why we are developing innovative new technologies to help redefine home maintenance.

Based in California's Silicon Valley, Neato Robotics wants to free everyone from the drudgery of household cleaning.

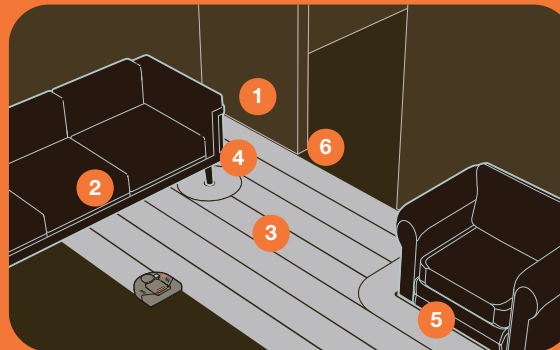

Your Future is Neat™

RPS Technology™

Using RPS Technology™, our unique laser vision and mapping system, your robot will see its surroundings and create a map of everything, including furniture, objects, and doorways.

Then using this map as a guide, your robot will vacuum the room – methodically and thoroughly – carefully avoiding furniture and walls. Working in a methodical pattern, the XV-11 knows its location at all times. When finished in one room, it will move to the next, and then return automatically to the charging base.

You will be assured a completely clean room – every time.

1. The rectangular front design allows vacuuming close to walls and into corners.
2. Low profile allows cleaning under furniture.
3. Always vacuums in straight lines.
4. & 5. Cleans closely around obstacles.
6. Automatic doorway recognition assures that it completely cleans one room before moving onto the next.

Features

Advanced High-Performing Vacuum. It will thoroughly clean carpets and floors and remove all kinds of dirt and debris, including tough pet hair.

Control Center. Simply program in your desired schedule. It will clean daily, weekly or as often as you want.

One-button Operation. Just press the start button to begin or stop its cleaning process.

Status Light. When the light is green, the XV-11 is ready to go to work. If the light is amber it may require additional charging or simple attention.

Dirt Bin. It's easy to empty and clean.

Home Charging Base. The Neato XV-11 will return to its base automatically so it will always be charged up and ready to clean.
